

Import CSV (Cloud)

It is possible to configure an MLCS Cloud field importing options from a CSV file.

Format of the file must be similar to this file: [ExampleCSV.csv](#)

The screenshot displays the Jira MLCS Cloud interface. The top navigation bar includes the Jira logo, 'MLCS on Forge', and various navigation links: 'Your work', 'Projects', 'Filters', 'Dashboards', 'People', 'Apps', and a 'Create' button. A search bar and a settings gear icon are on the right. The left sidebar lists 'Apps' with 'MLCS Cloud' highlighted and a 'DEV' status. The main content area is titled 'MLCS Cloud' and features three import options: 'Import CustomFields Tree (BETA)' (importing .json files), 'Import Data (BETA)' (importing .xml files), and 'Import CSV (BETA)' (importing .csv files). The 'Import CSV (BETA)' section is highlighted with a red box. It includes a 'Scegli file' button, a text field showing 'Nessun file selezionato', a checked 'Merge backup with existing data' checkbox, and an 'Import' button. A red arrow points from the 'MLCS Cloud' app in the sidebar to the 'Import CSV (BETA)' section. Another red arrow points from the settings gear icon in the top right to the 'Apps' section in the right-hand 'Settings' panel, which is also highlighted with a red box.
